12. DECLARATIONS

(i) Declaration by the inventor(s)

(**In case the applicant is an assignee**: the inventor(s) may sign herein below or the applicant may upload the assignment or enclose the assignment with this application for patent or send the assignment by post/electronic transmission duly authenticated within the prescribed period).

I/We, the above-named inventor(s) is/are the true & first inventor(s) for this Invention and declare that the applicant(s) herein is/are my/our assignee or legal representative.

(a) Date 04/03/2023

(b) Name	(c) Signature
1. Prof. James Stephen Meka 2. Mr. Ravikumar Inakoti 3. Prof. Prasad Reddy P.V.G.D.	
~~(ii) Declaration by the applicant(s) in the convention country~~

~~(In case the applicant in India is different than the applicant in the convention country:~~ ~~the applicant in the convention country may sign herein below or applicant in India may upload the assignment from the applicant in the convention country or enclose the said assignment with this application for patent or send the assignment by post/electronic transmission duly authenticated within the prescribed period)~~

~~I/We, the applicant(s) in the convention country declare that the applicant(s) herein is/are my/our assignee or legal representative.~~

~~(a) Date~~

~~(b) Signature(s)~~

(c) ~~Name(s) of the signatory~~

(iii) Declaration by the applicant(s)

I/We the applicant(s) hereby declare(s) that: -

- I am/~~We are~~ in possession of the above-mentioned invention.
- The ~~provisional~~/complete specification relating to the invention is filed with this application.
- ~~The invention as disclosed in the specification uses the biological material from India and the necessary permission from the competent authority shall be submitted by me/us before the grant of patent to me/us.~~
- There is no lawful ground of objection(s) to the grant of the Patent to me/us.
- I am/~~we are~~ the true & first inventor(s).
- ~~I am/we are the assignee or legal representative of true & first inventor(s).~~
- ~~The application or each of the applications, particulars of which are given in Paragraph-8, was the first application in convention country/countries in respect of my/our invention(s).~~
- ~~I/We claim the priority from the above mentioned application(s) filed in convention country/countries and state that no application for protection in respect of the invention had been made in a convention country before that date by me/us or by any person from which I/We derive the title.~~
- ~~My/our application in India is based on international application under Patent Cooperation Treaty (PCT) as mentioned in Paragraph-9.~~
- ~~The application is divided out of my /our application particulars of which is given inParagraph-10 and pray that this application may be treated as deemed to have been filed on DD/MM/YYYY under section 16 of the Act.~~
- ~~The said invention is an improvement in or modification of the invention particulars of which are given in Paragraph-11.~~

13. FOLLOWING ARE THE ATTACHMENTS WITH THE APPLICATION

(a) Form 2

Item	Details	Fee	Remarks
Complete/ ~~Provisional~~ specification)#	No. of pages : 12		
No. of Claim(s)	No. of claims : 08 No. of pages: 02		
Abstract	No. of pages: 01		
No. of Drawing(s)	No. of drawings: 02 No. of pages: 01		

In case of a complete specification, if the applicant desires to adopt the drawings filed with his provisional specification as the drawings or part of the drawings for the complete specification under rule 13(4), the number of such pages filed with the provisional specification are required to be mentioned here.

(b) Complete specification (in conformation with the international application)/as amended before the International Preliminary Examination Authority (IPEA), as applicable (2 copies).

(c) Sequence listing in electronic form

(d) Drawings (in conformation with the international application)/as amended before the International Preliminary Examination Authority (IPEA), as applicable (2 copies).

(e) Priority document(s) or a request to retrieve the priority document(s) from DAS (Digital Access Service) if the applicant had already requested the office of first filing to make the priority document(s) available to DAS.

(f) Translation of priority document/Specification/International Search Report/International Preliminary Report on Patentability.

(g) Statement and Undertaking on Form 3

(h) Declaration of Inventorship on Form 5

(i) Power of Authority

(j)**Total fee ₹…….in Cash/ Banker's Cheque /Bank Draft bearing No..... Date on ……. Bank.**

I/We hereby declare that to the best of my/our knowledge, information and belief the fact and matters slated herein are correct and I/We request that a patent may be granted to me/us for the said invention.

The following specification particularly describes the nature of the invention and the manner in which it is performed:

FIELD OF THE INVENTION

[001] The present invention relates to the field of the Artificial Intelligence and Machine Learning based transmission of secure data with novel techniques, methods, devices and apparatus. The invention more particularly relates to a system for secure data transmission over a network based on code generation and working method thereof.

BACKGROUND OF THE INVENTION

[002] The following description provides the information that may be useful in understanding the present invention. It is not an admission that any of the information provided herein is prior art or relevant to the presently claimed invention, or that any publication specifically or implicitly referenced is prior art.

[003] Further, the approaches described in this section are approaches that could be pursued, but not necessarily approaches that have been previously conceived or pursued. Therefore, unless otherwise indicated, it should not be assumed that any of the approaches described in this section qualify as prior art merely by virtue of their inclusion in this section.

[004] There has been a rising demand for secure data transmission through public and private communication networks due to the growing importance of such networks in commercial, industrial, military, and government sectors. Without a secure method of transmission, sensitive information such as financial records, medical records, and military secrets are at risk of being intercepted and misused. Financial information, including credit card and social security numbers, are often transmitted via the Internet and other networks in the course of commercial transactions. Unfortunately, it is not

uncommon for unscrupulous network users to intercept sent sensitive material, usually to the victim's great financial and emotional disadvantage. Data transmission in the industrial sector necessitates the same level of security. Annually, American businesses lose billions of dollars due to industrial espionage. The unauthorised interception of proprietary data transferred through public and private communication networks places industrial enterprise at a significant disadvantage, reducing corporate profitability and the viability of businesses across the board.

[005] Accordingly, on the basis of aforesaid facts, there remains a need in the prior art to provide a system for secure data transmission over a network based on code generation and working method thereof. Therefore, it would be useful and desirable to have a system, method, apparatus and interfaces to meet the above-mentioned needs.

SUMMARY OF THE PRESENT INVENTION

[006] In view of the foregoing disadvantages inherent in the known types of conventional transmission of secure data systems, methods and techniques, are now present in the prior art, the present invention provides a system for secure data transmission over a network based on code generation and working method thereof, which has all the advantages of the prior art and none of the disadvantages.

[007] It is an object of the present invention, a first means for establishing the authenticity among the entities and ensuring the safety of data transmissions over potentially compromised data communications networks by using a secret code shared between the entities, pseudo-randomly generated data values, and an encryption technique.

[008] Furthermore, entities connected with the computer system sends data to the first mean, which links to the transmission media via a modem or other mechanism using a network interface card, which may include an Ethernet connection, an interface device may additionally interface to a packet switching network, such as the Internet.

[009] In this respect, before explaining at least one object of the invention in detail, it is to be understood that the invention is not limited in its application to the details of set of rules and to the arrangements of the various models set forth in the following description or illustrated in the drawings. The invention is capable of other objects and of being practiced and carried out in various ways, according to the need of that industry. Also, it is to be understood that the phraseology and terminology employed herein are for the purpose of description and should not be regarded as limiting.

[010] These together with other objects of the invention, along with the various features of novelty which characterize the invention, are pointed out with particularity in the disclosure. For a better understanding of the invention, its operating advantages and the specific objects attained by its uses, reference should be made to the accompanying drawings and descriptive matter in which there are illustrated preferred embodiments of the invention.

BRIEF DESCRIPTION OF THE DRAWINGS

[011] When considering the following thorough explanation of the present invention, it will be easier to understand it and other objects than those mentioned above will become evident. Such description refers to the illustrations in the annex, wherein:

[012] FIG. 1, illustrates a conventional system for secure data transmission over a network based on code generation and working method thereof, in accordance with an embodiment of the present invention.

[013] FIG. 2, illustrates another schematic diagram of the system for secure data transmission over a network based on code generation and working method thereof, in accordance with an embodiment of the present invention.

DETAILED DESCRIPTION OF THE INVENTION

[014] The following sections of this article will provide various embodiments of the current invention with references to the accompanying drawings, whereby the reference numbers utilised in the picture correspond to like elements throughout the description. However, this invention is not limited to the embodiment described here and may be embodied in several other ways. Instead, the embodiment is included to ensure that this disclosure is extensive and complete and that individuals of ordinary skill in the art are properly informed of the extent of the invention. Numerical values and ranges are given for many parts of the implementations discussed in the following thorough discussion. These numbers and ranges are merely to be used as examples and are not meant to restrict the claims' applicability. A variety of materials are also recognised as fitting for certain aspects of the implementations. These materials should only be used as examples and are not meant to restrict the application of the innovation.

[015] Referring now to the drawings, these are illustrated in FIG. **1** & **2**, the present invention discloses a system for secure data transmission over a network based on code generation and working method thereof. The system is comprised of, but not limited to, a first means for establishing the authenticity

among the entities and ensuring the safety of data transmissions over potentially compromised data communications networks by using a secret code shared between the entities, pseudo-randomly generated data values, and an encryption technique.

[016] In accordance with another embodiment of the present invention, the entities connected with the computer system sends data to the first mean, which links to the transmission media via a modem or other mechanism using a network interface card, which may include an Ethernet connection, an interface device may additionally interface to a packet switching network, such as the internet.

[017] In accordance with another embodiment of the present invention, once a shared secret code has been formed and agreed upon by the entities, the invention enables them to carry out the necessary duties without sending the shared secret code, further, the secret code is used by both parties in an encryption technique to encrypt and decrypt values of pseudo-random data.

[018] In accordance with another embodiment of the present invention, the computer system is divided into client system and server system, which utilize token as the secret code for an authentication function to validate the identity of the client system to the server system the client system transmits token to the server system for verification.

[019] In accordance with another embodiment of the present invention, an initial token is known only by the client and server systems, is established and used to initialise the client system, and further, utilise this initialization token in an authentication and/or encryption procedure of pseudo-random data with the server system.

[020] Further, a second means to ensure that only those who know the shared secret code can deduce the right pseudo-random data values that will be used as an encryption key or authentication code, several encryption-decryption processes are utilised with varying encryption keys and pseudo-random data values.

[021] In accordance with another embodiment of the present invention, the packet switched network can be either a wired or wireless network, depending on the implementation to send data from the interface device to the second means having a second interface device via the packet switched network.

[022] The above-mentioned invention is provided with the preciseness in its real-world applications to provide a system for secure data transmission over a network based on code generation and working method thereof. Further, the data packetization and encryption is supported by the primary interface device, and further, data can be received from the second interface device and sent to the primary computer system of the entities via the first interface device.

[023] The benefits and advantages that the present invention may offer have been discussed above with reference to particular embodiments. These benefits and advantages are not to be interpreted as critical, necessary, or essential features of any or all of the embodiments, nor are they to be read as any elements or constraints that might contribute to their occurring or becoming more evident.

[024] Although specific embodiments have been used to describe the current invention, it should be recognized that these embodiments are merely illustrative and that the invention is not limited to them. The aforementioned

embodiments are open to numerous alterations, additions, and improvements. These adaptations, changes, additions, and enhancements are considered to be within the purview of the invention.

We Claim:

1. A system for secure data transmission over a network based on code generation, comprising:

   a first means for establishing the authenticity among the entities and ensuring the safety of data transmissions over potentially compromised data communications networks by using a secret code shared between the entities, pseudo-randomly generated data values, and an encryption technique.

2. The system as claimed in claim **1**, wherein the entities connected with the computer system sends data to the first mean, which links to the transmission media via a modem or other mechanism using a network interface card, which may include an Ethernet connection, an interface device may additionally interface to a packet switching network, such as the Internet.

3. The system as claimed in claim **1**, wherein once a shared secret code has been formed and agreed upon by the entities, the invention enables them to carry out the necessary duties without sending the shared secret code, further, the secret code is used by both parties in an encryption technique to encrypt and decrypt values of pseudo-random data.

4. The system as claimed in claim **1**, wherein the computer system is divided into client system and server system, which utilize token as the secret code for an authentication function to validate the identity of the client system to the server system the client system transmits token to the server system for verification.

5. The system as claimed in claim **1**, wherein an initial token is known only by the client and server systems, is established and used to initialise the client system, and further, utilise this initialization token in an authentication and/or encryption procedure of pseudo-random data with the server system.

6. The system as claimed in claim **1**, wherein a second means to ensure that only those who know the shared secret code can deduce the right pseudo-random data values that will be used as an encryption key or authentication code, several encryption-decryption processes are utilised with varying encryption keys and pseudo-random data values.

7. The system as claimed in claim **1**, wherein the packet switched network can be either a wired or wireless network, depending on the implementation to send data from the interface device to the second means having a second interface device via the packet switched network.

8. The system as claimed in claim **1**, wherein the data packetization and encryption is supported by the primary interface device, and further, data can be received from the second interface device and sent to the primary computer system of the entities via the first interface device.

ABSTRACT

A NOVEL SYSTEM FOR SECURE DATA TRANSMISSION OVER A NETWORK BASED ON CODE GENERATION AND WORKING METHOD THEREOF

[025] The present invention discloses a system for secure data transmission over a network based on code generation and working method thereof. In the present invention, a first means for establishing the authenticity among the entities and ensuring the safety of data transmissions over potentially compromised data communications networks by using a secret code shared between the entities, pseudo-randomly generated data values, and an encryption technique. Further, the entities connected with the computer system sends data to the first mean, which links to the transmission media via a modem or other mechanism using a network interface card, which may include an Ethernet connection, an interface device may additionally interface to a packet switching network, such as the Internet.
